

Gong *Logistic Regression* Analysis with R & Excel

Example of Graph Results

Run a logistic regression analysis on each field and determine whether the field increases or decreases the probability of losing a deal.

Probability of a deal hitting a late stage

The field 'multi_threaded_speaker' (right graph) was significant in a deal hitting late stage.

Multi-Threaded Calls per Team - % of Total Calls

Analyze multi-threaded call data per team.

*Data is blurred or altered for confidentiality

Multi-Threaded Calls per Team – Speaker % of Total

Analyze multi-threaded call data per team.

*Data is blurred or altered for confidentiality

Multi-Threaded Calls per Team - Win Rates

Analyze multi-threaded call data per team.

*Data is blurred or altered for confidentiality

Multi-Threaded Calls per Team – Logistic Regression

When we slice the data into a specific team, the impact of the multi-threaded field on whether a deal wins isn't as significant (doesn't cross the 50% probability line).
